STRONGER BUSINESSES BRIGHTER TOMORROWS

Your Data. Your Business. Our Priority.

What Backup & Disaster Recovery Actually Means

Business Continuity Disaster Recovery (BCDR) means keeping secure, tested copies of your business data so you can get back to work after ransomware, equipment failure, accidental deletion, fire, flood, or any other interruption.

1 Good backup is more than storage

A COMPLETE APPROACH KEEPS YOUR BUSINESS RESILIENT.

BACKUP TODAY
A BRIGHTER TOMORROW

- Automatic copies of files, databases, and systems
- Secure storage in multiple locations
- Protection from tampering and ransomware encryption
- Regular restore testing to prove recovery works
- Faster recovery – back online in hours or days, not weeks

2 What Backup Is NOT

COMMON MISCONCEPTIONS CAN LEAVE YOUR BUSINESS AT RISK.

Cloud sync is not backup
Deleted or encrypted files can sync everywhere.

RAID is not backup
RAID helps with drive failure, not ransomware or accidental deletion.

An on-site NAS is not enough
If fire, flood, or ransomware hits your office, that backup can be lost too.

Backups don't prevent disasters
They reduce damage and speed recovery.

3 The Bottom Line

Backup protects your data. Disaster recovery gets your business working again.

Threats

- Ransomware
- Equipment failure
- Accidental deletion
- Fire
- Flood

Recovery

- Secure copies
- Offsite storage
- Tested restores
- Business continuity
